### DETAILED ACTION

1. Claims 1-20 have been presented for examination.

#### *Double Patenting*

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claim 12 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 2. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

#### *Claim Objections*

4. Claim 1 is objected to because of the following informalities: The second Write\_enable signal determines whether the *second storage component* keeps its current data and valid bit or latches in new data and a new valid bit, not a *first storage component* [see fig. 1]. Appropriate correction is required.

Art Unit: 2115

5. Claim 17 is objected to because of the following informalities: It is unclear as to what bits the applicant is referring to in claim 17 on page 22 on line 18. For examining purposes, “temporarily storing the one or more bits” is interpreted as “temporarily storing the one or more *data* bits.” Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

First off, it is unclear if the first and second Write\_enable signals recited on page 18 lines 12 and 17 refer to the Write\_enable signals recited in claim 1 or if these are new write enable signals. Secondly, the examiner cannot find any support in the specification or drawings as to a forth multiplexer component, which is part of a first multiplexer component, which provides and receives a valid bit to and from a second storage component. At most, there exists a forth multiplexer component which receives a valid bit from a second storage component but provides a valid bit to a first storage component.

8. Claim 11 recites the limitation "the third multiplexer." There is insufficient antecedent basis for this limitation in the claim. It has been interpreted by the examiner that “the third multiplexer” should be “a third multiplexer.” Appropriate correction is required.

***Allowable Subject Matter***

9. Claims 1-5, 7-10 and 13-20 are allowed.

Art Unit: 2115

10. Claims 6 and 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
